

Al Process Optimisation Framework

Advise

Current process mapping

 Identification of what we can optimise with AI or other solutions (e.g. RPA, offthe-shelf solutions, business processes change) – the answer here may not be AI

Data assessment & preparation

- Verification whether **existing data is of sufficient quality** and is accessible
- Verification whether **what we want to achieve** will work with the data we have
- Identification of risks we may encounter while working with existing data
- Identification of **infrastructure challenges** for the solution

Policy & compliance assessment

- Verification of **ethical risks** and their mitigation
- Change management
- Legal verification

Build

Metrics implementation

Measurement of the **existing process**

PoC delivery & results verification

- Measurement of the new process/solution
- Comparison of the results: before and after the PoC
- Verification of the quality of **the results**

Product delivery

Delivery and implementation of the **full version of a new solution**

Run

Monitoring & support

Change management
